To whom it may concern,

## **Shelf Life Guidelines of Spanjaard Products**

We wish to take this opportunity to clarify the shelf life guidelines of the different categories of products in our range as follows:

### **AEROSOLS:**

The shelf life is determined by the guarantee on the aerosol valve which is 2 years from the date of manufacture of the aerosol in our factory.

Aerosols can last a lot longer than 2 years, without any loss in performance, provided stored correctly, but 2 years is the maximum guarantee period that we offer.

The 2-year guarantee is also on condition that the aerosols are stored correctly, indoors, away from direct sunlight, below 50°C, away from heat, flames, ignition sources, away from extremes of temperature and away from high humidity levels.

### **GREASES & PASTES:**

If stored unopened in the original packaging, indoors, away from direct sunlight, away from extremes of temperature and away from high humidity levels, the shelf life will be a minimum of 5 years from the date of manufacture.

### **LIQUIDS:**

When stored correctly (refer to greases and pastes), the shelf life could be as long as 5 years. It must be noted that there may be product colour changes over this period, hence we prefer to use 3 years from date of manufacture as the shelf life guideline.

Yours Sincerely  
**SPANJAARD LIMITED**
