

## Bronze Putty (BR)

### Description

Metal-Tek epoxies are two component systems that harden by the addition of a curing agent to the resin. Cured epoxies can be drilled, tapped, machined or painted. Metal-Tek (BR) is for repairing bronze and brass bushings, shafts and ferrous metal parts.

### Applications

Repair, rebuild, and maintain marine propellers, shafts, trays, chutes, gate valves, and pump wear rings.

### Benefits

- Non shrinking
- Can be drilled, tapped, machined or painted
- Bonds securely to bronze alloys, brass, copper and ferrous metals

### Product Features

- Boiling point >260°C
- Easily apply to vertical surfaces
- Machinable
- Chemical resistance
- Cures at room temperature
